

Mohamed Sayed Abdelkader

Backend .NET Developer

Cairo, Egypt | +20 1029684685 | mo.sayed2037@gmail.com | github.com/MoSayed335 | linkedin.com/in/mo7amed-abdelkader | mosayed335.github.io/portfolio

PROFESSIONAL SUMMARY

Results-driven Backend .NET Developer with hands-on experience engineering scalable, secure RESTful APIs and full-stack MVC applications using ASP.NET Core, C#, and SQL Server. Delivered 6+ production-like backend systems with 34+ API endpoints across E-Commerce, Education, Entertainment, and Service Marketplace domains. Proficient in JWT Authentication, Role-Based Authorization, Clean Architecture (SOLID, CQRS/MediatR, Repository Pattern), and third-party integrations including Stripe Payment Gateway, Firebase FCM, and SignalR.

TECHNICAL SKILLS

Languages & Frameworks: C#, ASP.NET Core Web API, ASP.NET Core MVC
Architecture & Design: Clean Architecture, SOLID Principles, Repository Pattern, DTO Pattern, Layered Architecture
Databases: SQL Server, Entity Framework Core (EF Core), LINQ
Tools: Git, GitHub, Postman, Visual Studio, Scalar

Security: JWT Authentication, Refresh Tokens, Role-Based Authorization, Policy-Based Authorization, OTP Verification, OAuth2
Integrations: Stripe Payment Gateway, SignalR, Email Services, FluentValidation, AutoMapper
Soft Skills: Problem Solving & Analytical Thinking | Team Collaboration & Communication | Time Management | Adaptability | Attention to Detail | Leadership & Mentoring
Languages: Arabic — Native | English — Professional Working Proficiency

EXPERIENCE

Backend .NET Trainee — Eraa Soft Jan 2025

- Engineered production-like backend applications using **ASP.NET Core Web API** and SQL Server, delivering 3+ fully functional systems within the training period
- Implemented **JWT Authentication**, Role-Based Authorization, and **Stripe Payment Gateway** integration across multiple projects
- Architected RESTful APIs following Clean Architecture and SOLID principles to ensure maintainability and scalability

Independent Backend Developer — Self-Employed Jan 2025 – Present

- Delivered 6+ backend systems using **ASP.NET Core**, covering E-Commerce, Student Management, Exam Management, Cinema booking, and Service Marketplace domains
- Engineered **34+ RESTful API endpoints** with secure JWT authentication, Role-Based Authorization, and Clean Architecture across all projects
- Actively developing a large-scale **Domestic Services Booking Platform** as a final graduation project at Eraa Soft

PROJECTS

Domestic Services Booking Platform (In Progress) | github.com/AhmedWEB22/Servers-Booking-Platform

- Architecting a full-scale service marketplace using **ASP.NET Core MVC with Clean Architecture and CQRS/MediatR**, covering 10 modules (Auth, Booking, Payments, Workers, Reviews, Notifications, Chat, Admin, Wallet, Search) with 3-role access system (Client / Worker / Admin)
- Engineered a **5-step booking wizard** with real-time worker availability, instant/scheduled booking, worker acceptance flow with time limit, recurring bookings, and cancellation/refund policy management
- Integrated **Stripe/PayPal payment gateway** with escrow system, multi-method support (InstaPay, Fawry, Vodafone Cash), automatic PDF invoice generation, partial/full refund management, and client/worker wallet system
- Implemented **real-time features** via SignalR (live chat + worker tracking), push notifications via **Firebase FCM**, SMS/email notifications across 10+ trigger events, and **Google Maps** integration for location-based worker discovery
- Delivered advanced features: **OAuth2** social login (Google/Facebook), OTP verification, National ID admin approval, mutual review system with dispute management, promo codes, loyalty points, and full **Arabic/English RTL** support

E-Commerce Web API | github.com/MoSayed335/Ecommerce-API

- Architected a production-grade REST API with **34 endpoints** across 6 modules (Products, Categories, Cart, Orders, Users, Admin) using Clean Architecture and Repository Pattern
- Engineered **JWT Authentication** with Refresh Token rotation and 3-tier Role-Based Authorization (Admin / Customer / Guest); implemented OTP email verification and structured error handling
- Integrated **Stripe Payment Gateway** for secure checkout flows; delivered DB seeding, email confirmation, and activity logging — migrated full system from MVC to clean Web API architecture

E-Commerce MVC | github.com/MoSayed335/EcommerceMVC

- Built a full-stack web application using **ASP.NET Core MVC (.NET 9)** with Bootstrap UI, covering product browsing, cart management, and order placement workflows
- Applied **Identity-based authentication**, Role-Based Authorization (Admin / Customer), and EF Core with SQL Server; served as the foundation later refactored into a clean REST API architecture
- Integrated **Stripe Payment Gateway** and applied SOLID principles with Layered Architecture throughout the codebase

Cinema Management System | github.com/MoSayed335/Cinema

- Built a full-stack Cinema booking application using **ASP.NET Core MVC (.NET 9)** with Bootstrap UI, managing movies, cinemas, showtimes, seat types (VIP / Regular), and bookings with automated price calculation
- Engineered a **4-tier Role-Based Access Control** system (SuperAdmin / Admin / Employee / Customer) with scoped permissions per role; applied SOLID principles and Layered Architecture throughout
- Integrated **Stripe Payment Gateway** for secure ticket checkout; built on SQL Server with EF Core for structured relational data access across all modules

EDUCATION

Bachelor of Computer Science — Cairo Higher Institute for Engineering, Sciences and Technology

Expected Graduation: 2027 | Relevant Coursework: Data Structures & Algorithms, Database Systems, Object-Oriented Programming, Software Engineering, Operating Systems
